BALDIEZ / SUPER BALDIEZ

BALDIEZ:

Developed to create professional BALD CAPS and work as an encapsulator for the fast production of prosthetics, by using this product it will enable the artist to create edges that melt away.
New Skins Encapsulator for even better edges why not try our skins encapsulator. Airbrush it straight into your Platsil Gel silicone mould and apply your Platsil Gel & deadener mixture over the top. Let it set, dust with talc to remove. Apply piece by sponging plat gel to the face as normal, and watch your edges dissolve with Acetone (solvent).

BALDIEZ BEADS:

Need Baldiez but don't want to pay hideous hazardous shipping charges? Here's the solution!
We are now selling the raw beads material for our Baldiez Bald cap. Just add acetone to dissolve and leave for 4-6 days depending on the temperature. (the warmer it is the quicker the beads will dissolve)

This also means if you're wanting to take a flight, no problem! Without the acetone it's not flammable and acetone is pretty cheap and readily available worldwide.

Directions: Measure out 1 part of Baldiez beads. Measure out 4 parts of acetone into the 1 part Baldiez beads. Screw cap on firmly and shake gently until all beads are coated with Acetone. Turn bottle on daily until all beads are fully dissolved, this will take approx. 4-6 days (depending on the temperature).

SUPER BALDIEZ:

Super BALDIEZ[®] edges can be blended into the skin using IPA in the same way other bald caps plastic use Acetone. It is more stretchy and snappier than regular Baldiez allowing for better blending in to the skin. This is much less likely to irritate skin when blending edges.

SUPER BALDIEZ SPRAY:

Mouldlife's original Super Baldiez[®] Encapsulate now available in an Aerosol.
A new Cost Effective and easy way to apply your Encapsulate Plastic. No mixing needed and No Spray Gun and Air Compressor required.
