FOUNDRY WAX

DESCRIPTION:

Our foundry waxes are a composition of various oil derivatives and natural resins. The waxes are specially formulated to make the foundry as comfortable as possible and are colored with a red aniline to allow all the details to be seen.

There are 3 different hardnesses:

Casting wax 135 (soft)	Average melting point: 67°C
Casting wax 225 (medium)	Average melting point: 70°C
Casting wax 425 (hard)	Average melting point: 76°C

The waxes should be melted in a bain-marie and then poured out.

STORAGE:

You can store the wax indefinitely in a cool and dry place.
