OIL MIXTION (3h and 12h)

DESCRIPTION:

Gilding glue for wood, metal, glass or plastic surfaces (indoors and outdoors).

COMPOSITION:

Glue on oil and solvent basis.

USE METHOD:

The surface to be treated must be perfectly clean and degreased. Dilute the product 20-30% with turpentine and apply with the brush in as thin layers as possible. Leaf can be applied 3 to 12 hours after application, depending on the chosen format. Protect the surface from dust during drying.

REVENUE:

10-12 m² / litre

STORAGE:

Store in a cool, dry place in its own container, closed and away from direct light and heat. The ideal temperature is 15-25°C with a humidity of less than 50%.

ADDITIONAL INFORMATION:

Dilution rate, application method and applied quantities can significantly affect the workability times. The most suitable application methods should be determined experimentally on the basis of the support used and the desired result.
